Power to Move

TRIATHLON[®]
TC Series

High demands of toughest industrial use. The premium choice for heavy duty applications

Modular Design

for high variances and easy
conversion for 2nd life applications

High Efficiency

Charging factor less than 1.03

Suitable for Coldstore

Winter outdoor applications

Applications

Forklifts

Floor cleaning
equipment

Material handling
equipment

Automated guided
vehicles (AGVs)

Aerial work
platforms

TRIATHLON lithium-ion battery systems are designed to meet the high demands of tough industrial use. A complete system consists of Li-ion modules of intelligent monitoring and control electronics, various safety components and an HF fast charger.

Voltage range:
24-120V

Data logger & report
function via USB

Capacity from 74 to 2,368 Ah
in 74 Ah steps

Continuous charging current
up to 800A

A revolutionary “smart” battery solution developed to exceed customer needs on a product, safety, and communication level

Preventive maintenance

Remote access and service capabilities via Sunlight IoT platforms (Sunlight GLocal)

Parallel Battery Topology

Uninterrupted battery operations via remote isolation of potential inactive modules through Sunlight GLocal

High return on investment

Maintenance-free and battery usage optimization, free after-sales support during the warranty

Incorporating years of success in design, innovation, and production of lithium-ion batteries for advanced applications, the Sunlight Li.ON FORCE product range delivers premium safety, high efficiency, and long life. Ideal across a wide range of industries, in particular industrial mobility.

Fast opportunity charging

Active balancing

Stable performance under harsh operating conditions

Battery protection & energy efficiency

Charging time: 1~1,5h – 3 shift operation

24/7 operability & serviceability via Sunlight GLocal

Applications

Forklifts

Automated guided vehicles (AGVs)

Floor cleaning equipment

Aerial work platforms

Light and durable. A perfect fit for your Class III applications

Compact design and easy installation

Narrow width to fit most Class III compartments and no need for lifting machinery

SoC indicator

Easy monitoring of the battery State of Charge without opening the battery compartment

Scalable parallel connections

Multiple parallel connections capability, which increases the capacity of the battery system

Class III Applications

Lightweight and standardized lithium-ion battery designed for all Class III vehicles

Lithium-ion battery designed with a robust construction to withstand mechanical and chemical strains for Class III vehicle.

Fast and opportunity charging (1-1.5h)

Protection of cells and battery

Resistant to mechanical and chemical strains

Small size for best fitting

Fully certified batteries according to UN / DOT 38.3, CE

Maintenance-free

SUNLIGHT
POWER IS KNOWLEDGE

Li.ONFORCE
PACK

Designed to provide premium power and lifespan, without a premium price tag

On-board-plug-in fast charger

45A built-in-charger for an optimized charge profile. Effortlessly connects to a standard 110 outlet, ensuring convenient and efficient charging.

Battery-truck constant connection

Narrow width to fit most Class III compartments

12-90-5 replacement

Battery, charger and requires ballast included

The Lithium Iron phosphate (LFP) battery chemistry is the ultimate choice to last the grueling demands of the workday.

Class III Applications

Cloud access Remote connection and bi-directional communication

BMS
Critical parameters monitoring and protection

LFP chemistry
Long lasting twice as long as lead-acid

Maintenance free
Minimize downtime and labor costs with the maintenance free design

A proven solution and nearly “maintenance-free” battery with excellent performance for traction applications

Tubular plate

Excellent interface, higher power density, high tensile strength, corrosion resistance

Red lead

99,99% pure lead for extended service life and full capacity within the first 3-5 cycles

Bottom bar

Ultrasonically welded with gauntlets, an advanced design bottom bar provides space for the unavoidable spine growth during operation

Applications

Forklifts

Floor cleaning equipment

Electric pallet jacks

Lifting platforms

Automated guided vehicles (AGVs)

Sunlight and Triathlon tubular plates design allows up to 135% more water than standard flooded lead-acid batteries and only requires watering once every 30 to 60 days, depending on application.

The bolt-on intercell design reduces the time required to change out a cell vs a weld on design by at least 30 minutes and is inherently safer.

Enveloped separator preventing short-circuits

High performance & high-power density

Fully recyclable product, circular economy enabler

Reliability and long service life

Maintenance-free sealed-type GEL battery ideal for critical environments

Operational flexibility

Minimum gas emissions and ventilation requirements

Sustained performance

GEL electrolyte eliminates acid stratification

Maintenance-free

Sealed type battery, no water topping up is required through the entire lifetime

Sunlight MotionGel and Triathlon TPzV series are a proven VRLA (Valve Regulated Lead-Acid) solution to minimize operating costs & maximize operational safety for industrial mobility.

Supreme solution for hygiene-sensitive product storage facilities with limited charging space or where maintenance is difficult. GEL electrolyte prevents acid stratification during daily charge-discharge operation prolonging the battery's life time.

Minimum gas emissions

No water topping up required

99.99% pure lead for extended service life

Fully recyclable product, circular economy enabler

arrestor for increased safety

Applications

Forklifts

Floor cleaning equipment

Electric pallet jacks

Lifting platforms

Automated guided vehicles (AGVs)

An ideal choice for operations under extreme conditions

Productivity

One XtremeForce battery can replace two conventional lead-acid batteries

High performance

By using a copper grid in the negative plates, we achieve reduced internal resistance

Operation under extreme temperatures

Cold storage, outdoor applications and seasonal business with high activity peaks

Applications

Forklifts

Floor cleaning equipment

Electric pallet jacks

Lifting platforms

Automated guided vehicles (AGVs)

Sunlight XtremeForce and Triathlon More Power product range, based on CSM (Copper Stretch Metal) technology, are able to operate under extreme conditions, offering high energy density for demanding and heavy-duty applications.

They can offer longer operating time through higher energy content as well as faster & opportunity charging through reduced internal resistance, helping to increase productivity.

Fast / Opportunity charging

Multiple shift operations

High energy density (heavy duty applications)

Fully recyclable product, circular economy enabler

Helping you explore sustainable life experiences

ElectroLiFe GC2 for golf cart

High-quality plug & play lithium-ion battery with capabilities beyond traditional ways

ElectroLiFe GROUP 49 for caravan and mobile homes

Designed for outdoor enthusiasts with limitless reliable power that will travel you to unexplored places and escape to nature

SUNLIGHT
POWER IS KNOWLEDGE

ElectroLiFe

series GC2 and Group49

High-quality plug & play lithium-ion batteries for semi-traction applications

High return on investment

Maintenance-free and battery usage optimization, free after-sales support during the warranty

High performance

Innovative BMS providing energy savings & extended life cycle

Parallel connections kit

Ultimate protection during installation & operation

Applications

Floor cleaning equipment

Material handling equipment

Aerial work platforms

Recreational vehicles

Marine use

Golf carts

Sunlight ElectroLiFe creates a unique customer experience with user-friendly features and accessories. With a plug & play, tool-less installation with press-to-release terminals offering full protection and ultimate safety during connection of batteries and operation.

Plug & play installation

SoC indicator on the dashboard

Scalable parallel connection

Complete voltage range
25.6V – 38.4V – 51.2V

Traction batteries GEL technology for industrial cleaning machines

Maintenance-free

**Sealed lead acid
batteries in gel
technology**

Deep-discharge-proof

Your cleaning machine should always be ready for use in order to cope with the daily tasks. Machine downtime or complete failure significantly restrict the workflow and cause unplanned costs.

Depending on your individual application, you can choose from various the GEL, AGM and Conventional (wet) battery technologies.

Recyclable

Applications

Floor cleaning
equipment

Lifting platforms

Forklifts

Power to charge

Sunlight PowerBox Chargers - Product Families

SLC Series

50Hz/Conventional Chargers

Options for charging profiles
(Wa profile 10-12h / Pulse
profile 7-8h)

US version of conventional
chargers with UL certification

High quality materials for high
durability and performance

User Interface with 3 status
Leds

Optimized charging profiles for
Sunlight Batteries

LLC fully controlled pcb board

SLH Series

HF (High Frequency) Chargers

Selectable charging profiles
(Up to 10 different options)

Lithium-Ion available models

Energy-efficient (efficiency
up to 95%)

US version available with UL
certification (selected models)

Optimized charging profiles for
Sunlight Batteries

Multifunctional LCD that
displays the charging profile in
real time with 4 status LED

Lithium Chargers

Fast charging systems of the TriCOM ion series are the ideal complement for the 5-Star Li-Ion TC-Range

Power & voltage downward compatible (24 to 80 V)

Maximum Power for heavy duty appl. : Up to 800A charging current possible

Modular design: power scalable in 50A steps

Efficiency Champion: Up to 97 % efficiency!

Power to Manage

Energy Management Solution

MD LOADManagement considerably reduces high peak demand through intelligent load management. Ensures optimum availability of your fleet while at the same time significantly reduces available mains connection power requirements.

Helps avoiding
high infrastructural costs

Enables
highest fleet availability

Significant
operational cost savings through
reduced capacity price

The innovative MD LOADmanagement enables smart energy management aiming at a significant reduction of the grid connection capacity.

An intelligent real-time algorithm controls the individual chargers and optimizes the power or current output.

Mapping of charging stations for
electric trucks and cars possible

Live view of individual
chargers & SoC via TriVIEW

Integration of PV systems
and stationary storage
possible as energy sources

Power to Connect

As a technology-agnostic company, we combine data-driven insights and Industry 4.0 tools, such as cloud computing and analytics, AI and Machine Learning. We participate actively in the digital transformation journey of your business, offering technological solutions, optimizing processes, and adding new capabilities in your operation cycles.

SUNLIGHT
POWER IS KNOWLEDGE

KnoWi

Sunlight KnoWi transforms big data into actionable intelligence and revolutionizes the way we power the world

Real-time monitoring: Integration and connection to Sunlight GLocal

Live alarms: Pro-actively amend procedures avoiding unnoticed threats that would reduce your battery performance and lifespan

Li-ion transition: Our AI and Machine Learning algorithms developed for our Lithium calculator in Sunlight Glocal, enables you to make data-driven decisions for your application based on battery and forklift usage, and evaluate a switch to lithium batteries

Sunlight GLocal integration: Data logged from KnoWi are automatically uploaded in Sunlight's cloud platform. GLocal is a user-friendly application that encompasses all your Sunlight Lead-acid and Lithium-ion battery data in a single platform

Cost control: Make confident and data-driven decisions and achieve high productivity while protecting your investment and equipment

SUNLIGHT
POWER IS KNOWLEDGE

GLocal
Battery Intelligence

The smart cloud-based platform for Sunlight lithium-ion batteries

Real-time monitoring: Monitor your batteries and forklift fleet status from anywhere in the world

Remote serviceability: Remote troubleshooting for service cost optimization. Up to 90% of issues repaired via GLocal

Live alarms: Early warning signs to avoid battery failure and lost productivity

User-friendly: Easy and enhanced communication. Effective fleet management. Enhanced productivity

Preventive maintenance: Uninterrupted operations via 24/7 battery monitoring, real-time notifications and instant intervention

Data capture & analytics: Optimizing battery performance and lifespan for your systems/ fleet

Cloud Solution TriView

Our cloud based TriVIEW platform bundles a variety of features in one web portal to view and manage ongoing contracts alongside any fleet. This way, the dashboard enables the controlling and monitoring of various applications.
